## EB-101 CLOCK MOVEMENT

*(suitable for clocks to 144" diameter-larger diameters available as EB-101HD)*

One EB-101 clock drive movement required for each clock face. The EB-series clock movements are built on an aluminum frame in a maintenance free design. The movements are driven by a 120 Volt, 60 hz, high-torque motor which is activated by the impulse type clock controller at one minute intervals.

The EB-200 SERIES Clock Controller is required for clock operation and to set clock hands.

EB-101 clock movement - (other configurations and mountings available)
