EB-101 CLOCK MOVEMENT

The EB-101 clock movement is custom built for specialty applications, or for specific replacement installations only – contact Elderhorst Bells, Inc. for information.

One EB-101 clock drive movement required for each clock face. The EB-series clock movements are built on an aluminum frame in a maintenance free design. The movements are driven by a 120 Volt, 60 hz, high-torque motor which is activated by the impulse type clock controller at one minute intervals.

The EB-200 SERIES Clock Controller is required for clock operation and to set clock hands.

EB-101 clock movement - (other configurations and mountings available)
