

Elderhorst Bells, Inc.

EB-106 CLOCK MOVEMENT

The EB-106 clock movement is custom built for specialty applications, or for specific replacement installations only – contact Elderhorst Bells, Inc. for information.

One EB-106 clock drive movement for each clock will be provided. The EB-106, impulse type clock drive movements feature all brass square cut spur gears, stainless steel shafts, and bronze bearings. The EB-series clock movements are built on an aluminum frame in a totally maintenance free design. The movements are driven by a 120 Volt, 60 hz, high-torque motor which is activated by the impulse type clock controller at one minute intervals.

The EB-200 Series Clock Controller is required for clock operation and to set clock hands.
